

# Engineering Compliance

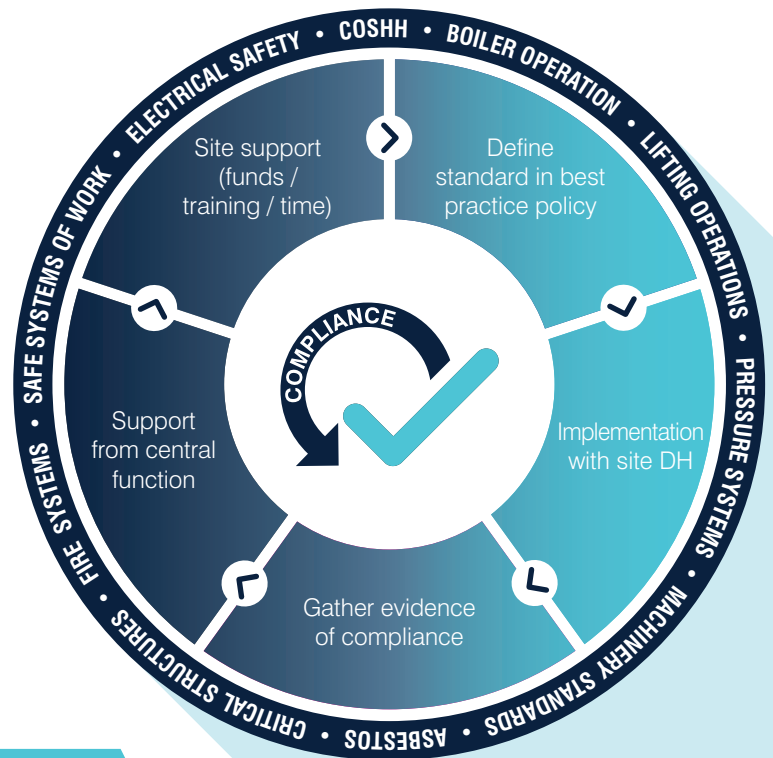

It can be difficult to understand your duties with regards to regulatory compliance. Whose role is it and what accountabilities and responsibilities do they have? Ursa Engineering Solutions can provide support and direction regardless of where you are on the journey to compliance.

The Ursa engineering compliance team has specialisms in electrical, mechanical, machinery safety and CE/UKCA compliance and assessment, with decades of experience in supporting our clients with compliance to all relevant legislation.

Our team provide compliance support to manufacturing and logistics sites across the UK in a range of industries including food and beverage, petrochemical and warehousing. The services we can provide span the whole of the compliance journey – from initial compliance health checks, to reviewing, planning and implementing remedial actions identified from PUWER & DSEAR assessments. We can help from providing strategy and direction through to individual audits and documentation, all tailored to meet the clients needs.

The steps you need to take to reach legal compliance vary across industries and can even be different for individual pieces of machinery.

Wherever you are in the compliance process, our engineers can support and guide you and your business to make sure you can meet your legal obligations and keep your employees safe in the most straightforward, non-disruptive and cost-effective manner possible.
